

**UNITED COMMUNITY SERVICES
OF AMERICA
PROUDLY PRESENTS...**

**THE FIRST EDITION CATALOGUE
REVIEW OF
BETTER WORLD TECHNOLOGIES**

A BRIEF HISTORY OF THE PROJECT

UNITED COMMUNITY SERVICES OF AMERICA began operations in 1974. In the beginning, the company was United Community Services (UCS), a marketing promotion company that touted a very unique concept known as THE COUPON CARD. THE COUPON CARD preceded the Discover Card and combined the features and benefits of discount buying, store rebates, cash back credit card, savings stamps and coupon savings... all rolled into one super consumer marketing promotion.

The COUPON CARD promotion offered a myriad of great benefits to both the consumer and the store merchants. UCS would earn its income by uniting the consumer and the merchant. It was an ambitious project and difficult to get off the ground. UCS recruited a major investor and the company name was changed to UCS of America (UCSA). Soon after making sizeable financial commitments, for reasons still unknown, the investor reneged on his word, and withdrew financial support from the project. UCSA was forced to suspend operations.

UCS of America (UCSA) was revived in 1988 to market a continuing line of technologies being developed by inventor/promoter, Dennis Lee. Mr. Lee developed the final improved version of the world's most efficient heat pump in 1985. The "Super Heat Pump", as it became known, was first marketed by a small group of merchants. That small group, many years later, has now expanded into a nationwide network of 2,000 dealerships with representation in every state throughout the USA.

Today United Community Services of America, Inc. has in place 2,000 dealerships and will never issue another dealership anywhere in the world! The UCSA dealers, for the most part, have waited very patiently for the completion of highly unique state-of-the-art technologies. Each product coming forth, alone, has the potential of changing entire industries to make leading products in those industries obsolete. Some of UCSA's technologies are capable of changing the world. Given the potential impact of UCSA's technologies and realizing that the world in which we do business is jealous of its products and markets, patience has been a necessary virtue for the entire dealer network.

There are presently about a dozen UCSA products on the market. Though not as "threatening" as some of the technologies soon to be released, each provides features, benefits, and advantages over existing products and technologies that now dominate major consumer, commercial and industrial markets. A significant portion of those who have activated their UCSA dealerships have already begun successfully marketing this first group of products.

As you study the following display of technologies it will become evident that much of what you are seeing is "highly sensitive" and proprietary. It represents only a small portion of the technologies that continue to be developed and funded by Better World Technologies (BWT). Better World Technologies, owned by Dennis Lee, is a technical organization involved in developing, researching, locating and funding cutting edge technologies primarily in the field of energy and environment. BWT researches and develops technology exclusively for the UCSA dealer network.

Among the numerous public awareness materials available regarding this project is a book called "The Alternative" written By Dennis Lee. It provides the complete history of this project from the beginning and explains how United Community Services of America, Inc. and Better World Technologies, Inc. came into being. Everyone is encouraged to read it!

If persistence is truly the key to victory then our victory is inevitable! (Dennis Lee)

BWT MISSION STATEMENT

Everybody is constantly talking about building a new world. At Better World Technologies, we do not want a NEW world, we want a BETTER world. Technology is vital to our humanity, community, enlightenment, welfare, comfort, progress, safety, liberty, enjoyment of life, health...Where would mankind be without the technical advancements of the ages? What society does not look back to previous times and wonder how they got by without their present day technologies? Even societies that want a more simple life use technology. Sometimes it is the interference of leaders and cohorts that deny the people the advancements they could have. An unenlightened people are more easily controlled, thus the insecurity of some leaders becomes the greatest obstacle to the true progress of their people. This is not leadership. The heroes of progress of the past and now the present are not anxious for progress that may upset their position in the social order of the society they are exploiting. Well over half of the peoples of the planet are living centuries of development behind the rest. The lack of progress in one part of the globe does effect the welfare of the people in other parts of the globe. Pollution, disease, territorial ambitions, are just a few examples of how interwoven all aspects of humanity truly are, and how dramatically the enlightenment (or lack of it) on the part of one group can effect the welfare of another. The bible states that the truth will set us free. There is to us no greater sin than the deliberate suppression of a technology that could uplift all mankind, especially in favor of the preservation of a technology that is insufficient for the needs of the public (and which may even be harmful to that population). It is our belief that all creativity comes from God. Man does not invent, he discovers. He is given vision to share with others. To lift them up and improve the world in which we all live. To bring forth the creativity that has been revealed to us by our creator is the ultimate expression of what makes us unique in the creation. To profit by making all those in our society better off than they were is, to us, very honorable. Our pledge is to be strong enough never to suppress and always do all we can to advance a technology that has been revealed by God to those inventors...to never disrespect the creativity of such an inventor...to have the courage to move on with development even if it means we must retool or otherwise restructure our existing ways of exploiting a previous technical advancement of ours...to have the courage to face the suppression of technology by others no matter how powerful they seem to be...to do all that is in our power to help other visionaries that seek primarily to build a better world. We will not deal in fear or dishonor. We will have the character to stand up for the truth, and we are convinced it will, indeed, set us free...

BETTER WORLD TECHNOLOGY HAS BEEN WORKING TO BUILD AND REBUILD A WHOLE LINE OF ENGINES THAT CAN ADVANCE ENGINE TECHNOLOGY TO WHERE IT SHOULD ALREADY BE...

If someone were to graph the development of the internal combustion engine since its inception, it would have gone up a little at first, leveled off, and then practically flat lined out by now. Likewise, chart the progress of the computer since the inception of that device and get a straight line to heaven. Why? The industry has been tightly controlled by industrialists with political allies that have exploited mainly the automobile. The key to overcoming this stronghold is public enlightenment to individual alternatives and making these alternatives available to the public. We are developing a wide array of options all of which will dwarf anything the media is promoting on behalf of the Big-Three car makers, but we have the advantage of being able to merely modify or replace the engines in the existing cars. We figure that for the usual cost of replacing any engine, we can offer car owners an engine that could last over 500,000 miles (maybe a million) on one rebuild; not require any oil changes ever again outside of the engine rebuild; and run pollution free without the owner ever again having to pay for any gasoline, diesel, or costly electricity! Cars and jet planes can even be powered using only tap water as the fuel. Other things can be done with these unique engines for stationary functions every bit as important to the lives of people as the applications involving vehicles. (This will be shown a little further on in this brochure).

The Fischer Engine (a purely liquid engine cycle)...

This Fischer engine is 6 inches diameter and 11 inches long (the barrel in the middle is the actual engine). It requires no exhaust, makes no noise, burns nothing, provides 80 horsepower, and weighs only a few pounds.

The Fischer Single or Double Stroke Engine...

This is a high torque, low RPM engine. It does not operate on the same RPM of the internal combustion engine. It has slower more deliberate power. For an automobile, it would require a change in transmission and drive train.

Brauer Engine double exhaust...

(See same thing as single exhaust - E20) Erik Brauer (race car driver and BWT researcher) sought to modify existing internal engines to run without any type of combustion. He is developing a high torque high RPM engine that would require simple modifications to make your existing engine run with no gasoline.

Brauer Engine destroys a torque wrench...

This 318 cu. in. Chrysler engine could normally get 85 ft.# of torque running on two of the 8 cylinders. Only two cylinders were modified... it destroyed a torque wrench. With all 8 cylinders it could get 1500 ft.# of torque. A huge Mack Truck uses about 1500 to 1700 ft.# of torque.

New Engine Block Modification...

Our researchers are working on a concept to enable us to modify existing internal combustion engines to run with no gasoline, diesel, or direct electricity but rather on heat harmlessly extracted from the air at no operating costs.

Brauer Closed Loop Engine...

Erik Brauer modified a four cylinder engine. This time it was a closed loop, which means it runs with no exhaust (and no noise). The controls at the top of the engine modulate the speed of the engine like a foot pedal would.

Brauer Closed Loop Engine...

The Brauer modified engine ran noiselessly in a closed loop at Philadelphia in front of thousands of witnesses, but it had problems with seals and valving. We could not yet demonstrate high torque or RPM with the closed loop.

UCSA Browns gas engine...

When Browns Gas in a cylinder is exposed to a spark, it implodes. The stoichiometric mixture of hydrogen to oxygen is perfectly balanced, but when air is added with a spark an explosion occurs. An internal combustion engine can thus be made to run using water as the fuel.

UCSA Brown gas engine running...

We ran a four cylinder engine at the show in Philadelphia in front of thousands of witnesses on Browns Gas (pure water) and Dennis Lee even drank the water that came out of the exhaust. Imagine powering your car on water.

Browns gas engine 1976...

Believe it or not, Professor Brown (partner with BWT on all applications of Browns Gas for the USA and Canada) ran a car on Browns Gas (water) in Australia in 1976. This is the engine he ran. He claimed 100 MPG of water!

Water Fuel Cell

INTERNATIONAL NEWS RELEASE

A pulsed field Hydrogen Separator can separate Hydrogen from water to use as fuel for a jet, as well as drive the generator that excites the field. Imagine a flight from New York to Los Angeles on one tank of water.

A pulsed field Hydrogen Separator can separate Hydrogen from water to use as fuel for a jet, as well as drive the generator that excites the field. Imagine a flight from New York to Los Angeles on one tank of water.

Electro Magnetic Engine Cycle...

Most six cylinder engines have only 160 pounds of compression firing every other RPM. This 6 cylinder Flywheel Motor with opposing crank fires 12 magnets each revolution for a 12 to 3 ratio above any 6 cylinder gasoline engine.

Electro-Magnetic Flywheel Powered Golf Cart...

An improved one horsepower Flywheel Motor runs this golf cart at 12 miles per hour. It would ordinarily take a 3-5 horsepower motor to achieve the same speed.

Electro-Magnetic Engine (engine close-up)...

This is a 5 Horsepower Flywheel Motor that powers a Geo Prism vehicle at 40-42 MPH on the street using only two 12 volt batteries. Only 24 volts, 9 amps, and 2,160 watts (138 less than a 3 horsepower motor) to power this car.

Electro-Magnetic Car...

This chevy GEO Prism is powered by two 12 volt batteries and will go up to 42 miles per hour. A 6 cylinder gasoline engine fires on only three cycles of its rotation. This motor fires all 12 magnets each revolution.

Hydraulic motors on all four wheels...

Why not put a hydraulic motor on each of the wheels of a four wheel vehicle? The hydraulic fluid can be controlled and sent to the wheels you wish to have power. Want four wheel drive, front wheel drive, rear wheel drive?

Electric motors on all four wheels...

Put the power where it is needed when it is needed. The momentum of the wheels can also be exploited on the downhill side of the equation. An Electric Generator or storage can be maintained elsewhere on the vehicle.

Heat Engines on all four wheels...

We are developing the worlds most efficient thermal storage device and the worlds most efficient heat engines. Why not put heat engines (possibly with RPM amplifiers) and small Hot Boxes at each wheel?

DENNIS LEE DEVELOPED THE WORLD'S MOST EFFICIENT HEAT PUMP USING A UNIQUE APPROACH TO REFRIGERATION THAT EFFECTIVELY AND HARMLESSLY COAXES ENERGY RIGHT OUT OF ANY WEATHER SITUATION (NIGHT OR DAY) THROUGH TEMPERATURE DIFFERENTIAL. IT IS CALLED LOW TEMPERATURE PHASE CHANGE...

The Super heat pump was called THE ALTERNATIVE. The operating efficiencies far outperform anything made by Carrier, Trane, General Electric, Westinghouse, Borg Warner, Lennox, or any of the huge companies that make the conventional heat pump. This is not an ordinary heat pump. It can also air condition like a heat pump, but it has none of the disadvantages of other heat pumps (like a defrost cycle, leaks, or forced convection). It just maximizes the energy that can be taken from the environment day or night, in sun, wind, snow, rain, or any weather. BWT distributes replacement refrigerants that are totally organic and that do absolutely no damage to the environment or to the ozone layer. They are not even regulated by the EPA. BWT has since even developed a unit that will air condition without any need for any type of refrigerant at all. It will also be the world's most efficient air compressor as well as a freon free air conditioner. Compressed air can then be made to power any air operated device inexpensively.

Super Heat Pump applications...

Dennis Lee developed the most efficient Heat Pump in the world. It is called THE ALTERNATIVE, and gets C.O.P.s as high as 12 to 1. Thousands of them were made and installed throughout the USA. It is a proven technology.

Super Heat Pump diagram...

The primary advantages of THE ALTERNATIVE is the massive evaporator plates (that never need defrosting), the massive condenser to process the 50 pounds of refrigerant charged in a 3 HP unit, and the TX valving.

C.O.P. Comparison Chart...

PERFORMANCE COEFFICIENT		
IDEAL	AVERAGE	
1/1	1/1	Electric Heat
4/1	2/1	Conventional Heat Pump
12/1	6/1	Solar Heat Pump

Conventional Heat PUMps get an average COP of 2 to 1. Electric resistance heaters (like water heaters) get 1 to 1. Even costly Ground Source heat pumps only get 4 to 1. But THE ALTERNATIVE can get as high as 12 to 1 and gets an average of 6 to 1 (2 to 1 below 0°F)

Evaporator panels on side of house...

The panels are placed anywhere and on any angle as long as the sun, wind, rain, and air can touch them. 8 panels 8 x 3 make up a two sided surface that provides almost 400 square feet of surface for heat transfer from the air.

Evaporator panels in tower array...

The panels can be installed in a tower design that helps air flow and exposure to the elements. Experts can see by the frost pattern how the refrigerant is well distributed. Ice or frost build up does not alter the panel surface area.

Evaporator panels in rack design...

The panels can be put into a rack design so the processor can be placed under them and the unit can be portable. In this design, the unit can come pre-charged with refrigerant and thus avoid custom charging on the job.

THE ALTERNATIVE processor...

This is the part that goes into a home. The processor will fit into a foot locker box 2 x 3 x 2 and needs no monthly, weekly, or daily maintenance. It can be put under a stair, in a closet, or in the boiler/furnace room out of sight.

THE ALTERNATIVE heat exchanger...

The hot refrigerant is sent from the compressor to a heat exchanger that is placed in the heating ducts for forced air homes. Air blowing through the duct is heated. Water can be made hot to circulate in a different exchanger.

THE ALTERNATIVE processor close up...

The processor is really very simple with nothing to maintain. The compressor needs to be replaced from time to time (one unit ran over twelve years on the original compressor).

THE ALTERNATIVE commercial unit...

Larger units can be made to provide commercial heat or hot water. It is the most efficient commercial hot water heater in the world beating even conventional solar hot water heaters. We offer a Free Trial to commercial users.

HC-12a • HC-22a™
NATURAL ORGANIC REFRIGERANTS

The Intelligent Solution to a Global Dilemma

OZ TECHNOLOGY, INC.
 America's Finest Natural Organic Refrigerants

HC-12a and HC-22a...

Freon 12 was recently banned. Refrigeration experts will agree that 134a (the replacement) is a terrible refrigerant that they hate. R-12a is the one we sell to replace R-134a. A look at the enthalpy charts show why.

Some Questions & Answers

Do HC-12a and HC-22a™ Offer Other Benefits?

Do HC-12a and HC-22a™ Require Retooling?

Are HC-12a and HC-22a™ Safe?

Do HC-12a and HC-22a Meet EPA Approval?

Are HC-12a and HC-22a™ Approved?

Refrigerant Vapor Pressure vs. Temperature

Refrigerant Vapor Pressure vs. Temperature

Legend:

 • R-134a
 • HC-12a
 • HC-22a

New HC-12a and HC-22a refrigerants...

Refrigeration technicians loved R-12 refrigerant. HC-12a acts more like R-12 than R-12. HC-22a is more like R-22. These are not controlled by the E.P.A. They do not do any damage to the ozone (more than I can say for Chlorine).

Air conditioner with no refrigerant...

One BWT researcher is making an air conditioner that will not need any refrigerants at all to condition the air or refrigerate. the compressor will be the most efficient one in the world and it will even make compressed air.

THE ALTERNATIVE demo model...

This is a small two panel hot water unit that we use at shows to demonstrate THE ALTERNATIVE. The panel gets ice cold and the cold refrigerant goes to the compressor where it comes out hot to heat exchange hot water.

MAKING FREE ELECTRICITY AND PUMPING WATER FOR FARMERS AT NO OPERATING COST CAN BE DONE USING LOW TEMPERATURE PHASE CHANGE TO EXTRACT ENERGY RIGHT FROM THE ENVIRONMENT (EVEN TAPPING INTO THE GRAVITATIONAL AND MAGNETIC FORCES OF THE EARTH TO ENHANCE OR ALSO ACCOMPLISH THE PROCESS)...

Engines do other things besides powering vehicles. Some functions for engines or motors are stationary. Pumps, electric generators, and compressors are just a few of the devices powered by stationary engines. The nicest thing about our engines is that we have developed environmentally and consumer friendly engines and motors. Through the combination of all our technologies, we plan to bring total energy independence to the public. All the engines we discussed earlier can drive generators to make electricity or pumps to pump water, but the idea (at least at first) is to get the energy to run these engines from either a Low Temperature Phase Change (refrigeration process), magnetic energy or gravity. Everyone can have their own electric generator that makes ALL of their power at no operating cost from energy harmlessly extracted from the environment outside their homes (even in a snow blizzard at night). Farmers can pump water, or make electricity, absolutely free. The heat pump is so efficient, that it can run even a Rankine cycle as long as the COP is above 5 to 1. That process is called the LTPC GENERATOR (OR FARM PUMP). Of course, the real winner is when we combine the efficiencies of the Super heat pump with the Fischer cycle engine that needs no condenser at all, but can use any liquid as the working fluid. This combination will extract energy from the air outside at any temperature anywhere on the earth (day or night) to power the Fischer engine that drives a generator, car, pump or any mechanical device at absolutely no operating cost at all! Of course, when you can get free electricity, there is no limit to what can be done...you can do it all!

Original LTPC Generator...

The worlds first Low Temperature Electric Generator ran all day and all night as long as there was a heat source of 200°F and cool lake water (our Super Heat Pump makes over 200°F from ambient day and night all year long).

LTPC Farm Pump...

The Super Heat Pump can make hot refrigerant very efficiently from ambient, and cold water from the ground on its way to the crops can cool the gas down to repeat the work cycle that pumps the water and drives the compressor. The crops get luke warm water for free.

LTPC Commercial Generator...

Using the Rankine Cycle of the LTPC concept we put a big flywheel on the shaft to smooth out the cycles of the Generator to make free electricity using the cold water into the building as the condenser and the Super Heat Pump for the high side. With C.O.P.s over 4 or 5 it can produce free electricity.

Another view of the Commercial LTPC Generator...

There are two incredibly efficient brazed plate heat exchange condensers to use the high volume of cold water as it enters the building to cool our refrigerant gas for the low side before it is heated in their existing boiler. Electricity can be made with the hot water production on the same nickel!

Diagram of the LTPC Generator...

200°F heat enters the bottom boiler expanding refrigerant gas through a rotary turbine and is cooled back into a liquid in the condenser at the top by circulating cool water from a nearby lake or stream.

LTPC Farm Pump running...

The big flywheel is powered by a cylinder that drives the direct drive compressor, that compresses refrigerant expanded by the air outside to make hot working fluid expand in the the cylinder that drives the big flywheel. It also enables the pump to pump water for the condenser. You might say each component drives the other. Notice the running water in the background. It is pumped free.

Ezekials Wheel...

A wheel within a wheel was described in the Bible. This makes the best pump in the world. It is incredibly efficient and takes very little power to pump massive amounts of water (couple it with our electric motors).

Mike Hand Pumps Water...

In this demonstration our man hand pumped 30 gallons of water from one barrel to another in as many seconds. He used the Ezekials Wheel Pump. Just imagine draining a swimming pool by hand (A man is not a horsepower).

LTPC lights bulbs at our shop...

This unit can light over 20 bulbs with energy from a regular hot water tank for the high side and ground water for the low side. You could get water hot with anything from a wood stove to solar or our heat pump.

Portable LTPC Farm Pump...

The whole apparatus that pumps the water for free can be put on a trailer and hooked up to the evaporator panels during the watering season. In the Summer when the water is needed, the Heat Pup performs at its peak.

Braze Plate Heat Exchanger...

The Worlds most efficient heat exchanger has a large number of plates for a big counter flow surface for heat exchange. One foot wide by two feet by 8 inches thick can exchange 6 million BTU's per hour at a delta T of 100°F.

Fischer Steam Engine System...

This Steam Engine uses mostly liquid in the Fischer Cycle. It is a liquid in and liquid out cycle. Dr. Fischer is one researcher on the team at BWT. He developed a closed loop engine that requires no external condenser. It is the most efficient engine cycle in the world. Any liquid (even low temperature refrigerants) can be used in it.

Side View of the Fischer Steam Engine...

This engine uses water heated almost to the critical temperature, but still in the liquid state to drive a big piston and power a generator. A Super Critical Oxidation process can provide the temperature from toxic waste, sludge, and garbage and turn waste into electricity.

Fischer Electric Generator...

Any liquid can be used to power the Fischer Engine, at a temperature approaching its critical temperature. Many refrigerants have a critical temperature near the usual temperature outside, and no condenser is needed for the cycle, so it can produce FREE electricity using Co₂ taking heat directly from the air outside night or day.

Implosion cycle demonstrated...

Browns Gas implodes when a spark is introduced. The cylinder above was filled with gas. A spark was delivered creating an instant vacuum. When air (at one atmosphere) was allowed to fill the vacuum, it lifted 300 pounds of weight a foot in the air. That is three hundred foot pounds using 14.7 psi air at sea level. It will pump water or provide mechanical power for an engine cycle.

A Unique One Horse Motor...

Electro-Magnetic motors can do amazing things. This 1HP motor is being powered by a regular household type 9 volt battery. At this show it sat there and ran for two hours on one 9 volt battery in front of a large audience.

Whatever energy source is used for a device to provide the torque to a shaft and drive a mechanical device (generator, pump, drive train), the torque provided can be doubled for twice the output of work by using the force of gravity...

Gravity Torque Amplifier...

From an idea of Nicola Tesla, Jim Murray, BWT sponsored researcher, developed a device to take advantage of unusual geometry to magnify torque. Gravity is thus exploited to double the torque of mechanical devices.

Close up of Gravity Torque Amplifier...

The top (heavier) wheel rides on the lower wheel, and as it rotates it magnifies torque. For each pound of force applied at the bottom to turn the wheel, there is a net gain of two pounds of force at the top to double torque. In a way the top wheel is always falling.

There are other ways to make electricity besides these extraordinary mechanical devices that take energy from the ambient temperature of the outside, gravity or magnetics. We can use the wind, sun, and even a new type of tide generator. In fact, the Waveberg Tide Generator can be coupled with an electrolysis to make fresh water for sale pumped right out of the ocean at no operating cost.

Solar Concentrator...

The sun gets far hotter than the air that surrounds us and is heated by it. The heat can be concentrated by focusing it on one spot. In this trough, the rays are all focused on the center line to heat fluid up to 1,000°F.

Solar Tracker...

Some researchers build elaborate devices to track the sun. Why not build a device the sun tracks? Place this unit on an East/West axis. Fluid if routed only through the collectors that are in direct contact with the sun.

The Windflower Generator...

In this picture, the wind machine that is most often promoted by the D.O.E. (called The Whisper) is certainly whispering (at a stand still) while the Windflower that we promote makes electricity in as little as a 3 mph wind. Ours is spinning like a top in this photo.

Waveberg...

This is the cousin to the Kepler Buoy. It is a different model. The ocean would have to be dead calm not to give us some pressurized fluid to run a generator. Imaging a light house on the ocean that is powered by the ocean.

Waveberg in ocean...

One arm is down while another is up as the wave passes under the unit. The unit can generate electricity from the motion. Imagine this sending signals to satellites as an ocean marker, or running tests for Oceanographers.

The Kepler Buoy...

The top rides on the ocean while the bottom section is being pulled down by the weight of the water. The tides pull up and the water holds it down and the pumping action makes energy!

THE REALLY INTERESTING THING IS THAT THERE IS MORE THAN ONE WAY TO DO EVERYTHING WE ARE DISCUSSING IN THIS BROCHURE. WE CAN GET MUCH THE SAME BENEFIT USING HYDRAULICS ...

Refrigerants boil at very low temperatures at atmospheric pressure. The one in your refrigerator at home boils at 40° F BELOW ZERO! They boil in the Super Heat Pump panel (evaporator) pretty much all the time, and when they do they build up pressure. This pressure is free because it comes from nature at no cost. Of course 8x3 panels can be put on truck or railroad car bodies as well as on a rack mount in the field. The pressure is not great enough to power an engine, but through hydraulic intensification it can be. When gas pressure is used to transfer energy to hydraulic fluid, the gas pressure is decreased. When the pressure of refrigerants is lowered enough, they compress back into a liquid at much lower temperatures. This pressure/temperature/intensification relationship gave us an idea...

Hydraulic Intensifier Engine...

Hydraulic fluid can be used at high pressures to power hydraulic motors. This unit uses large volumes of lower pressure refrigerant gases to make small volumes of high pressure hydraulic fluids to power hydraulic motors.

Intensifier Concept (diagram) :

The large chamber accepts the pneumatic fluid (refrigerant gas) into the top, which pushes a plunger down the chamber. An extension of the plunger, likewise travels down a smaller chamber to pressurize hydraulic fluid at a 15:1 ratio. Freon in a bottle at room temperature is multiplied fro 150 psi and 2,250 psi hydraulic fluid produced.

Intensifier Concept (demo)...

We hook up a refrigerant bottle (R-134a) and the room temperature gets the pressure in the bottle up to about 130 psia. We open the valve and it hits the gas chamber, which pressurizes hydraulic fluid to about 2,000 psia.

Hydraulic Wheel Motor :

This motor is built right into the wheel hub. It can supply up to 500 HP using hydraulic fluid that is no more than 5,000 psi. Our evaporators sitting outside can get R-22 up to 400 psi. Fifteen x 400 is 6,000 psi hydraulic fluid.

Hydraulic Wheel Motor (diagram)...

There are very few moving parts in this motor. It can run forwards or backwards depending on the direction the hydraulic fluid is injected. In fact, the best brake in the world is to suddenly inject the fluid the other direction (make sure your seat belt is fastened before you apply that brake)!

Hydraulic Choo-Choo Trains and Trucks...

The 8 foot by 3 foot evaporator panels can be slapped up against the sides and even top of the rail road cars or truck bodies to expand the gases and make the fluid for the wheel motors. The faster they go, the faster they can.

Hydraulic Electric Generator...

This little unit demonstrated that we could have R-134a refrigerant from a bottle at room temperature, and flow it through an Intensifier to produce hydraulic fluid and power a motor that runs a generator that lites ten bulbs.

Semi-Stationary Hydraulic Motor Applications :

We can use low pressure gases to take the energy from the air, converting the lower pressures to high pressure until gases are easily condensed. Stationary applications (wenches) or fork lifts with short lines or accumulators are easier because evaporator panels can be used on site.

Hydraulic Farm Pump...

In the LTPC Farm Pump, the mechanical energy drove the compressor. An Intensifier could eliminate the need for a compressor and all the energy transfers could be done hydraulically. The water pumped condenses the gas.

Hydraulic Wheel Motor (torque test)...

This Wheel Motor had outstanding torque even at 80 psi on the hydraulic fluid. We held it back to that so we would not rip Big Mikes arms off. At 5,000 psi, two will power a Mack Truck. Imagine powering the truck by expanding refrigerant in panels on the side of the truck.

WE DEVELOPED ALSO THE WORLDS MOST EFFICIENT THERMAL STORAGE DEVICE. IT CAN HOLD VERY HIGH TEMPERATURES IN SMALL SPACES FOR LONG PERIODS OF TIME. WE CALL IT THE HOT BOX.

The Fischer engine runs on heat. No fuel is necessary to power it, but you do need a heat source. The Hot Box absorbs heat through electric Cal-rods or by circulating a heat transfer liquid. The Fischer Generator takes energy out of the air for free at a persons home. They could charge the Hot Box in their car with their Fischer Generator at night while they are sleeping. A special Hot Box model was made for cars as well as other heat storage models. Through special state of the art insulation, the very high temperature heat could remain in the Hot Box all day (or even all week long). By the way, there is another type of engine cycle that BWT makes that can run your car or run an electric generator without exhaust or the need for a condenser. It is called the Sterling Engine Cycle. It runs just on heat. All you need is a heat source. With the Hot Box, your car could also be powered with this engine type. The Sterling engine goes all the way back to the late 1800s. I guess that for want of enough thermal storage capacity, on board your car they burned gasoline...But No More!

Hot Box demo...

This was one of the first demo models of the Hot Box. It uses sand (which has a very high specific heat) and a metal matrix to transfer the heat in and out. We could hold 33,000 BTU's storage per cubic foot...then a record!

Large Commercial Hot Box...

We had to build a unit that was pretty large and very cumbersome to store just over 2 million BTU's of heat. There was enough stored energy in one unit to make 2-3,000 gallons of hot water or heat a large building.

Improved Commercial Hot Box Model...

We discovered a material that was 9 times the specific heat of sand. So, we could store 300,000 BTU's in one cu. ft. So, we could build the unit much smaller and wiser. This Hot Box is only 3" x 3" x 3" = 9 cu. ft. for 2MBTU's+.

Improved Commercial Hot Box diagram...

To get the heat out of the Hot Box, there is a thermostat in a closed mixing chamber that regulates the transfer of heat to keep the pressures in line. Air is less volatile than liquids to take the heat form the Hot Box below.

Hot Box for Automobiles...(see S-1 to S-5)

The Fischer and Brauer Engines are heat engines. With no gas tank heat has to be stored for power. We can get energy equal to a tank of gas in this rechargeable four pack. There is plenty of room for multiples of storage cylinders. Enough heat storage is possible for one charging a month.

MY PLASTIC Insulation :

There is an insulation that beats out everything typically known of today. It is called MY PLASTIC. It is a secret formula, but it works wonders. The inventor coated a piece of combustible material with it and the torch did not burn thru.

An Incredible Demonstration of MY PLASTIC...

In this picture, an ordinary uncooked egg is coated with MY PLASTIC and a burner that is burning 1200°C. This is incredibly hot and ordinarily the egg would be instantly cooked. As an insulator, this is the very best.

The Egg Did Not Even Cook...

At 1200°C (over 2,000°F) through a thin coating of MY PLASTIC, the egg held up. When it was cracked with a knife, it has not even begun to cook! If we line our Hot Boxes with this, we could hold them in our hand, and not get burned.

Sterling Engine model...

The Sterling Engine (late 1800's) uses heat. Heat is applied to the barrel (nose) of the unit and the high pressure air produced through differential pressure rushes to the rear then the spool like affair cools it off.

The Other Side of the Sterling Engine...

The pressure of the top barrel causes a piston in the smaller barrel to go back and forth, which drives the wheel around. The rotating wheel is mechanical drive power that could power a generator of even a car.

IT WAS ONLY NATURAL THAT IF BWT HAD THE WORLDS MOST EFFICIENT THERMAL STORAGE DEVICE THEY DEVELOP THE WORLDS MOST EFFICIENT BURNERS AND STOVES AS WELL...

The Adiabatic Bicoannular Reactor (ABR) burns absolutely smokeless and can completely eliminate the need for garbage pickups ever again! BWT also distributes the Water Stove for people who have lots of wood or farm refuse to burn. We also market a little device that uses the Sterling heat engine technology to blow heat into the room from the top surface of a wood stove. It just sits right up on top of the stove and the heat drives a piston that makes the fan go. Of course a larger Sterling engine with the barrel installed into the fire box of either the ABR or the Water Stove could then make electricity or mechanical energy by burning garbage or wood. The Fischer engine can also be combined with a Super Critical Oxidation process to eliminate the need for landfills, eliminate all sludge and municipal waste, and even get rid of all of the toxic waste in our society.

Adiabatic Bicoannular Reactor (home model)...

This stove burns anything (garbage, old boots, shoes or chicken bones) without making any smoke. It can even burn toxic waste without noxious gases. It burned coal over 90% efficient. There is no longer any need for garbage pick ups.

Adiabatic Bicoannular Reactor (home model)...

This stove burns anything (garbage, old boots, shoes or chicken bones) without making any smoke. Just put your garbage right down a chute to the basement and add heat to your home or hot water.

The ABR Fire Burns Hot...

The Adiabatic Bicoannular Reactor burns up to 5,000°F with no noxious oxides (nox) and burns white hot. It separates the basic chemicals and burns them several times. There is some ash, which is great for the flowers!

Water Stove model...

This is a Water Stove that burns wood, coal, or farm refuse. It heats all your water and your home or barn. We also can use the heat to power a Sterling Engine and run a Generator that can provide electricity from wood.

Water Stove illustration...

Wood or refuse is burned in a box in a bigger Chamber filled with water. Heat is exchanged directly into the large body of water for home heat or water. A Sterling Engine barrel could be placed directly into the fire. DO NOT try to build your own model unless you understand steam expansion! (DANGEROUS!)

The Free Breeze Wood Stove Fan...

This little unit sits right up on top of the wood stove. The heat from the stove top is used to warm up the barrel of a Sterling Engine that drives the little piston to make the fan blades go round and blow the hot air into the room...FREE!

SPEAKING OF BURNING UNUSUAL THINGS, BWT HAS THE EXCLUSIVE RIGHTS TO BROWNS GAS FOR ALL THE USA AND CANADA.

Imagine being able to burn ordinary water. Believe it or not you can weld metals (including aluminum) with it, braze anything to anything else with it, cut through any thickness steel with it, and even use water to fuel your internal combustion engine with it. The Browns Gas Machine turns ordinary water into a gas and when that gas gets a spark, it immediately reverts back to water. Thus you can desalinate any water into pure drinking water. When the gas makes contact with a spark it implodes (rather than exploding). If a cylinder full of Browns Gas implodes, it creates a vacuum. Through this process of implosion, you can even use the gas to pump water without using any mechanical device.

The Browns Gas Welder...

Believe it or not, you can burn water. This machine separates hydrogen and oxygen from water and mixes them back together stoichiometrically in a new way. Water is HOH, Browns Gas is HHO. You can weld with HHO. It is a pure gas (water).

Brown Gas Balloon...

There is a new substance called Browns Gas. This gas is also water. This balloon full of water floats. Browns Gas is found nowhere in nature, and is a manmade substance. UCSA has the exclusive rights for the USA and Canada.

Steel Welded to Brick (BG)...

Dennis Lee, in this frame, holds up a steel rod that has been welded to a brick using a Browns Gas Welder. This is one example of the uniqueness of this as a welder. It can cut, braize, weld, and vaporize almost anything.

Tungsten Sublimated (BG)...

The temperature at which Tungsten sublimates is about 13,000°F. That is also the temperature of the surface of the sun. In this picture, we are sublimating Tungsten using a Browns Gas Welder that is burning water to do it.

Cutting Steel with Water (BG)...

Imaging using ordinary water (like the stuff we drink every day) to burn and get temperatures hot enough to cut or weld steel. It will cut even a 3" thick steel plate like a butter knife in warm butter, and there is no slag.

Implosion Cycle demonstrated...

Browns Gas implodes when a spark is introduced. The cylinder above was filled with gas. A spark was delivered creating an instant vacuum. When air (at one atmosphere) was allowed to fill the vacuum, it lifted 300 pounds of weight a foot in the air. That is three hundred foot pounds using 14.7 psi air at sea level. It will pump water or provide mechanical power for an engine cycle.

UCSA HAS EVEN GOTTEN INVOLVED IN THE SAFE PRODUCTION OF FOOD...

We are promoting a process to rejuvenate the soil for farmers and a process to eliminate the need for pesticides while growing higher yields and more nutritious produce...There is no longer any need to use toxic chemicals or fertilizers that destroy the soil for farming. We can provide dozens of farmers who are thrilled and no failures of all those who use this totally organic product.

Sixteen Foot Tall Corn Stalks..

An organic product called Sonic Bloom can make your garden grow without pesticides. It is capable of incredible things like this corn growing 16" tall with ears two feet long that are more nutritious and better tasting.

Huge Cabbage...

This cabbage is not only huge, but it was still being eaten six months later without preservatives. Sonic Bloom puts nutrients (since the soil is depleted) directly in the leaves of the plant. Sound makes them receptive.

Huge Pumpkin...

This award winning pumpkin, grown with Sonic Bloom, weighs twice as much as the man that grew it. Tomato plants are known to grow as many as 500 tomatoes on one plant! The yields are increased as are the crops per year.

Worlds Largest Plant...

Normally the Purple Passion Plant grows to a length of no more than 18". This indoor plant was grown by Dan Carlson, the inventor of Sonic Bloom, to a record length of 1300 ft. It is in the Guinness Book of World Records.

UCSA WILL EVEN GET INTO BETTER HOME BUILDING PROCESSES.

There is a new construction material that will last over 2,000 years. The home will be completely maintenance free for that entire period. It is easy to build with, indestructible, and very low cost to build higher quality homes than any other product in the world! Plastic lumber and posts can also be made from recycled plastic. Even though plastic is not bio-degradable, who wants to live in a bio-degradable house?

The Low Cost Plastic House...

A model of the completely plastic home building process. It is indestructible. Two people can lift the roof on. It never needs reroofing and will not ever leak. This plastic has no offgassing problems and UV rays do not harm it.

Plastic House on Truck...

This truck is pulling up with a complete house on board. Two people can now assemble this entire two bedroom 1300 sq. ft. plastic home in one week, and they do not even need a hammer or any skills. It is like a Lego set.

Plastic House Factory...

The plastic homes are built in a factory. Raw materials form the plastic in molds. The walls are insulated and sent to the construction site ready to go. It is even bulletproof. Nothing will damage them for 2,000 years.

Completely Plastic Home...

These plastic homes withstand hurricanes, tornadoes, earthquakes, and will not burn. They can look like any building style (brick, wood, stucco, etc.) up to three stories, and can be sold for about one quarter of the cost.

Plastic Benches...

There are other processes to use plastics. We can use recycled plastic to build permanent benches, farm fences, and retainer walls. There is also a new plastic lumber product that is just like wood (you can saw, cut or nail it).

WE ARE DEVELOPING ALL KINDS OF ELECTRONIC DEVICES.

We are very excited about the great clues that Nicola Tesla (greatest unsung electrical and mechanical genius of the world's history) left behind for us. It is obvious to us that this man knew more about electricity than any human being that has ever lived to this date. He died before anyone alive today was born but when he died he knew more about electricity than anyone alive today knows. And we are planning to prove that!

Nicola Tesla (Greatest Scientist in the World)

Before any of us were born, this man had a plan to give us all free electricity which probably got him killed. We plan to call our national free electricity utility THE INTERNATIONAL TESLA ELECTRIC COMPANY in honor of this great man.

The Tesla Rotating Generator (TG)...

We demonstrated a rotating electro-magnetic device (Tesla Generator) that can power a mercury vapor lamp with at a saving of about one third of the cost to operate it. It matches the source impedance with no ballast at all.

Murray Explaining Tesla Generator...

Jim Murray, full time researcher for BWT and possible the leading expert on Nicola Tesla, explains the Tesla Generator to the audience of thousands. Jim explained that what the audience was witnessing cannot be done.

Close Up of Scope (TG)...

Looking at the scope while our Tesla Generator was in operation, a square wave can be seen. This is incredible. It is not possible to get a square wave from a rotating electro-magnetic device. Tesla always did the impossible.

Power Controller...

Electric motors usually do not match the load to the power output. Now there is a low cost computerized device that goes between the power source and the motor that saves up to 50% the electricity consumed by any inductive motor!

THERE IS A LOT MORE WHERE THIS CAME FROM. BWT IS DEVELOPING HUNDREDS OF TECHNOLOGIES. THIS BROCHURE CONTAINS MERELY A SAMPLING OF WHAT IS TO COME ...

There is a noiseless Jack Hammer sold through the network currently, a heat paint that can transfer heat evenly through the walls themselves, a Theft Interrupter circuit that can keep your car from getting stolen, a Fire Barrier product that when sprayed on things makes them fire retardant, a fire shaker for putting out stove fires (even when you are not at home), a new compressor that works on permanent magnets, a whole line of fire extinguishers, household products...even a flying saucer!

Cooking Egg with Heat Paint and 9v Battery...

Special paint can be painted on a surface and then it transfers heat from a low voltage energy source. There are lots of applications...on the walls to heat your home...defrost jet wings...keep snow off your driveway...and on...

Heat Paint demonstration...

This board is painted with the special paint and low voltage electricity is sent from one copper plate on one end to the other. Heat is transferred across the entire surface. The paint can be painted over with the color of choice.

The Fire Barrier...

We have a full line of fire fighting and prevention equipment that is the best in the world. Spray the drapes, couch or Christmas tree with a clear, odorless, organic product and stop worrying about it catching fire.

The Theft Interrupter Circuit...

Make it impossible for a thief to steal your car (even if they have your keys). They must know to put the turn signal on first (or other item of your choice) or the car locks up and will not start and cannot be hot wired! The only way to take your car is to tow it. Another device we sell will stop car jackers!

Fire Shaker...

In most house fires, the fire starts at the kitchen stove. The Fire Shaker is beads of Siliconated material that will not cake up and will always be in dry powder form to put out the fire. Even pour water in it, and it will remain dry.

Permanent Magnet Compressor...

A compressor can be built in which the piston chamber and plunger operate on two strong magnets and a big spring. The piston is pulled back by magnetic attraction and briefly de-magnetized and the spring takes over.

Flying Saucer...

Of course there is a flying saucer. This one is very much manmade, and it flew in the 50's in Europe. It was made by Prof. J.R.R. Searl. We plan soon to have our own model so we can give visitors rides (We will charge for them).

THE COMPANY THAT RESEARCHES AND DEVELOPS ALL OF THIS TECHNOLOGY IS BETTER WORLD TECHNOLOGIES, INC. IT IS OWNED BY DENNIS LEE...

There are all sorts of technologies that are presently in progress. BWT has several research facilities and machine/fabrication shops staffed to get the job done. Learning a lesson from the earlier California days, BWT is spread out all over the USA. In the United States, BWT is funding research in Florida, Delaware, California, Missouri, Colorado, Idaho, North Dakota, Washington, Virginia, New Mexico, Nevada, Iowa, Indiana as well as supporting several facilities in New Jersey. The march of technologies is ongoing. We are also financing inventors in other parts of the world. When inventors have ideas that Better World Technology thinks will work, we get involved. We help the inventor get the project to the prototype stage, and then to the pre-production stage and into production as well. When this has been accomplished, United Community Services of America gets involved with the national dealer network. UCS of A is capable of manufacturing/assembling the product as well as marketing and financing sales.

SOME OTHER EXCITING PROJECTS IN THE WORKS...

A NEW PROPULSION TECHNOLOGY...

It can eliminate the need for NASA altogether. This device will be able to get one G of force with a 10 horsepower motor. This means that 1,000 pounds can be levitated using a 10 HP motor. It also means that with another 10 HP (20 HP), one thousand pounds could be raised through our atmosphere at 32 feet per second per second. With 30 HP it could be raised at 64 feet per second per second (of course, it could levitate 3,000 pounds or raise 1,500 pounds up at the rate of 32 feet per second per second). This means that the engine in your existing pickup truck could raise the same payload into space as the current space ship launching by NASA is doing now (without a launching pad or very much exhaust). This means we will soon be capable of low cost space travel. We could go into space, pick up mineral rich asteroids, and return to the earth with them with no re-entry problems to mine the richest deposits of minerals known to man (asteroids from space). Plus a lot more.

A CAMERA THAT FILMS THROUGH WALLS, STEEL WALLS AND EVEN YOUR SKIN OR MUSCLE LAYERS TO TAKE PICTURES (STILL OR VIDEO) OF WHAT IS ON THE OTHER SIDE

This camera will be able to take pictures of your vital organs while you are standing up or even take a video of your skeleton while you are standing or laying down. The doctor can look at your heart through your clothes, see tumors, plaque, or even the size and color of your appendix while you are standing there! Emergency staff at an accident could send videos thru a modem to the doctor at the emergency room to prescribe treatment right at the scene!

AN EXPLOSIVE PROOF MESH

Imagine lining the insides of gas tanks and tankers with an explosive proof mesh that will prevent that tank from ever blowing up (NO MATTER WHAT HAPPENS). ALSO IMAGINE LINING NOT ONLY THE TANKS, BUT ALSO THE BAGGAGE COMPARTMENTS OF JET PLANES WITH THIS... GOOD BYE TERRORISM!

BWT HAS OBTAINED THE EXCLUSIVE MARKETING RIGHTS TO A PROCESS THAT CAN NEUTRALIZE ALL RADIOACTIVE WASTE (ALPHA, BETA, AND GAMMA) FOR THE ENTIRE UNITED STATES OF AMERICA.

Believe it or not, there is a process that can enable scientists to use Browns Gas in a special way to neutralize radioactive waste. BWT became partners with Professor Yull Brown for the marketing rights to the process in the USA. While the government is trying to take the radioactive materials that are currently exposing the people of this country to the greatest threat to their existence in our history and bury it in the ground, there is a much better solution. It can be made completely stable and thus neutral. It has already been demonstrated. This is by far the most important discovery of all we have found. The following picture is of a New York Congressman the Honorable Dan Haley addressing an audience in which he is relating the details of a demonstration which Professor Yull Brown did for a US Congressman, Honorable Berkley Bedell of California In it a piece of cobalt 60 was over 90% neutralized in one pass. The geiger counter in the room did not go off, but the geiger counter that read the radioactive level of the sample in the first place was at a reading of 1,000 just before the procedure and instantly went to a reading of only 40 after Professor Yull Brown zapped the sample. The U.S. Congressman, after witnessing the demonstration, called the Department of Energy and they sent five scientists down to witness the same demonstration with the same results. We are currently trying to get the US government officials to wake up and let us do a very public demonstration of the process to prove to the people of this country that the entire nuclear waste problem can be eliminated (NOT JUST BURIED AND POSTPONED FOR A WHILE). The UCSA dealers cannot distribute this technology, so we found a unique way for them as a group to profit by using this unique technology.

WITH MORE COMING THAN YOU COULD EVER IMAGINE

THIS IS A PROJECT OF THE HEART. WE HAVE DARED TO DREAM THE IMPOSSIBLE DREAM AND FOLLOW THE VISION

The idea that energy could and should be freely abundant is not necessarily harmful to the infrastructure of America. It certainly is not to the rest of the world. This could be a great boost in production, especially since electricity has been the single most important technology to the GNP of this country (see chart below left). What could free fuel really do for the production of goods and services in the USA? There is no reason why the big utilities cannot exploit their grid system to deliver it. There is no reason why the fossil fuels people would go broke just because they lose one market when they have petro-chemicals. (Maybe we can stop destroying trees to live in permanent plastic homes.) We have been laughed at because we were foolish enough to fight the big oil and gas companies. We have persevered through a decade of this attitude. Now, we are certain that when the people see clear alternatives they will stop laughing. We started on nothing and have deliberately grown through incredible obstacles to the place where we have a nationwide distribution network, factories, machine shops, foundries, and all sorts of expertise. Our dealers range from an elderly lady on social security to the largest refrigeration supply house in the USA. Major corporations have also bought in. We are a force that will not be stopped. In 1996 BWT was inducted into the International Inventors Hall of fame. In the same year we went to Washington DC and did an energy show for the Congress and all representatives of the Federal Government. More importantly, we did two tours of the entire United States. We showed the people more than their Department of Energy has ever shown them... The most astonishing part is that this is just the beginning. FREE Energy is energy the consumer does not have to pay for. The machines cost money, but FREE Energy is more than possible and is very practical now! We do not believe in over unity. Energy must come from somewhere, but to say there is no such thing as perpetual motion is sheer folly. Of course there is (as long as there is a perpetual energy source)! Gravity, solar, magnetics are all examples of a perpetual energy source. The earth (a huge mass) has traveled around the sun at 78,000 mph (faster than anything man has ever built) pretty much perpetually. The energy source is the sun's gravitational pull! If we could tap into the same energy source would it not be perpetual motion?

GNP and Electric Consumption chart...

This chart shows the amount of electricity consumed in the USA in the last 90 years. The same line also shows the GNP for the last 90 years. Does this tell you anything about the financial importance of electricity to the USA?

Inventor Hall of Fame Award for BWT (1996)...

The research team for Better World Technology won the ADVANCED TECHNICAL THEORY AWARD for the concepts of free energy we were then working on. It was for our theories on how to eliminate all forms of pollution world wide and get us out of the fossil fuels era.

Grog Cartoon...

"Now, Grog! Throw!... Throooooow!... Throw throw throw throw throw!"

We do not want a new world, we want a better world, so we just decided to get down into the water and hope that the people will be willing to back us up. The technologies to do the job are available and we have survived the struggle thus far. We believe the people are ready for world changing technologies!

Seattle ALTERNATIVE Factory...

We started out manufacturing for ourselves and we know that end of it. In our national network of 2,000 dealers nationwide we have foundries, factories, marketing organizations, and machine shops. We can build, develop, and market any practical technology.

Our Company has Machine Shops...

We have three machine shops of our own at the beaoned call of the various researchers that we have in house and scattered throughout the world. We do not typically send out work unless it is impossible for outsiders to learn much.

We Have Skilled Technicians...

We have professionals on the payroll to fabricate, machine or build and test anything whether it is metal, wood or electronics. In addition, many of our dealers have these skills and often volunteer their services.

Our Support Shops...

We have all our own bridgeports, lathes, metal saws, grinders and all the equipment we need.

Our Support Technicians...

We have "in-house" machinists, welders computer specialists, etc.

Research Scientists...

We have experts on staff in electronics, mechanics, engineering, computers, hydraulics, fabrications, metalurgy, chemistry, electricity...we also support outside inventors.

Pre-Production Shop and Expertise...

Once a working model has been made of an invention, it is time to get a different team on the job. Those who do pre-production modeling are different than inventors. They make a model that can be copied for manufacturing.

At the BWT Research Resort, we have a 20 room facility with sauna, hot tub, and a country kitchen and all the service staff. We also have another machine shop, storage, and fabrication shop. Experts are assembled here to live and think together until a problem is solved whether it only takes a day or two, weeks, or even longer. We even have a surveillance proof conference room. Security is very tight! BWT speaks to no one except UCSA who only speaks to their dealers. *(note: R.J. Pirrone is a business broker that buys and sells UCSA dealerships to the public. They talk to anyone interested).* The only exception is that we do also speak to outside inventors who want to join or effort.

The BWT Think Tank...

We have a hotel type facility where experts are brought together to work and live together until a problem can be solved. There are conference and think tank rooms with a fully equipped shop, engineering computers, and library.

ALL OF THE PRODUCTS DEVELOPED AND FUNDED BY BWT WILL BE MARKETED EXCLUSIVELY BY THE 2,000 DEALERS IN THE UNITED COMMUNITY SERVICES NETWORK

Only the dealers in the network will ever have the rights to distribute these technologies worldwide! The dealers have already been recruited. If you see something in this brochure that you would like to buy, you will have to contact a UCS of A dealer in order to do so. If you just want information about a product or products in this brochure you will have to contact a dealer to get it. There is no group or entity in the world that is powerful enough to deal directly with UCS of A or BWT on any of these technologies. PLEASE DO NOT WASTE OUR TIME TRYING TO GO DIRECT. BWT deals ONLY with UCS of A, and UCS of A deals ONLY with their dealers. UCS of A will NEVER issue another dealership. All 2,000 have already been issued. THERE WILL NEVER BE ANY MORE THAN THAT! If you are interested in getting involved with the distribution of these technologies, you must buy out one of the existing dealers. If a dealer in good standing wishes to sell their dealership to anyone else (or to any business entity) they most certainly may.

A NOTICE OF CAUTION FOR ANY WOULD BE BUYERS OF UCS OF A DEALERSHIPS:

Let us caution the buyer that you should get official recognition from UCS of A of the transaction before giving the seller any money to buy a UCS of A dealership. UCS of A will work with the dealers for them to properly sell their dealerships to others. The price will be whatever the dealer agrees to take for the dealership. Before buying one, the would be buyer is entitled to receive written confirmation from UCS of A that the dealership is, indeed, a valid dealership and is in good standing. The dealers have been recently selling their dealerships for as much as 50 times what they sold for when it all began in 1988. Of course, as the companies develop more of a product line the value of these dealerships can be expected to increase. UCS OF A realizes that the potential for increased value was an attraction for certain of the original dealers. Some of the dealers initially bought multiple dealerships so they could sell one or more of them to get operating capital for the one they decided to work themselves. It is very much in the best interests of UCS of A to have productive dealership entities rather than inactive dealers that are speculating. It is also good for the project that someone that cannot do much with the opportunity they have be able to sell it to a new owner that intends to move products. Even if the new owner is speculating themselves, it is the belief that ultimately someone will purchase the dealership with the idea in mind of doing something with it. The more a dealer pays for the opportunity, the more they will have to do with it, so UCS of A is pleased to see dealers selling the opportunity for a good return to themselves. UCS of A has nothing to do with a transaction between a dealer wishing to sell his, her, or their dealership to another party, but MUST insist that the new buyer be obligated to the original contract and all modifications to date! When a person, group of investors, or corporation buys one of these existing dealerships, they are buying a relationship with UCS of A. While some of that goes all the way back in time a decade, we MUST insist on uniformity in the network. ALL THOSE WHO TAKE OVER DEALERSHIPS MUST ALSO ABIDE BY ALL THE RULES AND REGULATIONS OF THE PROJECT. THE SELLING DEALER CANNOT CHANGE THE TERMS AND CONDITIONS BETWEEN THE COMPANY AND THE NEW OWNER OF THE DEALERSHIP.

IF THE READER OF THIS BROCHURE IS INTERESTED IN OBTAINING FURTHER INFORMATION ON ANYTHING COVERED IN THIS BROCHURE, CONTACT US AT:

Water Stove illustration...

Wood or refuse is burned in a box in a bigger Chamber filled with water. Heat is exchanged directly into the large body of water for home heat or water. A Sterling Engine barrel could be placed directly into the fire. **DO NOT try to build your own model unless you understand steam expansion! (DANGEROUS!)**

The Free Breeze Wood Stove Fan...

This little unit sits right up on top of the wood stove. The heat from the stove top is used to warm up the barrel of a Sterling Engine that drives the little piston to make the fan blades go round and blow the hot air into the room...FREE!

SPEAKING OF BURNING UNUSUAL THINGS, BWT HAS THE EXCLUSIVE RIGHTS TO BROWNS GAS FOR ALL THE USA AND CANADA.

Imagine being able to burn ordinary water. Believe it or not you can weld metals (including aluminum) with it, braze anything to anything else with it, cut through any thickness steel with it, and even use water to fuel your internal combustion engine with it. The Browns Gas Machine turns ordinary water into a gas and when that gas gets a spark, it immediately reverts back to water. Thus you can desalinate any water into pure drinking water. When the gas makes contact with a spark it implodes (rather than exploding). If a cylinder full of Browns Gas implodes, it creates a vacuum. Through this process of implosion, you can even use the gas to pump water without using any mechanical device.

The Browns Gas Welder...

Believe it or not, you can burn water. This machine separates hydrogen and oxygen from water and mixes them back together stoichiometrically in a new way. Water is HOH, Browns Gas is HHO. You can weld with HHO. It is a pure gas (water).

Brown Gas Balloon...

There is a new substance called Browns Gas. This gas is also water. This balloon full of water floats. Browns Gas is found nowhere in nature, and is a manmade substance. UCSA has the exclusive rights for the USA and Canada.

Electric motors usually do not match the load to the power output. Now there is a low cost computerized device that goes between the power source and the motor that saves up to 50% the electricity consumed by any inductive motor!

THERE IS A LOT MORE WHERE THIS CAME FROM. BWT IS DEVELOPING HUNDREDS OF TECHNOLOGIES. THIS BROCHURE CONTAINS MERELY A SAMPLING OF WHAT IS TO COME ...

There is a noiseless Jack Hammer sold through the network currently, a heat paint that can transfer heat evenly through the walls themselves, a Theft Interrupter circuit that can keep your car from getting stolen, a Fire Barrier product that when sprayed on things makes them fire retardant, a fire shaker for putting out stove fires (even when you are not at home), a new compressor that works on permanent magnets, a whole line of fire extinguishers, household products...even a flying saucer!

Cooking Egg with Heat Paint and 9v Battery...

Special paint can be painted on a surface and then it transfers heat from a low voltage energy source. There are lots of applications...on the walls to heat your home...defrost jet wings...keep snow off your driveway...and on...

Heat Paint demonstration...

This board is painted with the special paint and low voltage electricity is sent from one copper plate on one end to the other. Heat is transferred across the entire surface. The paint can be painted over with the color of choice.

The Fire Barrier...

We have a full line of fire fighting and prevention equipment that is the best in the world. Spray the drapes, couch or Christmas tree with a clear, odorless, organic product and stop worrying about it catching fire.

The Theft Interrupter Circuit...

Make it impossible for a thief to steal your car (even if they have your keys). They must know to put the turn signal on first (or other item of your choice) or the car locks up and will not start and cannot be hot wired! The only way to take your car is to tow it. Another device we sell will stop car jackers!

Fire Shaker...

In most house fires, the fire starts at the kitchen stove. The Fire Shaker is beads of Siliconated material that will not cake up and will always be in dry powder form to put out the fire. Even pour water in it, and it will remain dry.

Permanent Magnet Compressor...

A compressor can be built in which the piston chamber and plunger operate on two strong magnets and a big spring. The piston is pulled back by magnetic attraction and briefly de-magnetized and the spring takes over.

Flying Saucer...

Of course there is a flying saucer. This one is very much manmade, and it flew in the 50's in Europe. It was made by Prof. J.R.R. Searl. We plan soon to have our own model so we can give visitors rides (We will charge for them).

THE COMPANY THAT RESEARCHES AND DEVELOPS ALL OF THIS TECHNOLOGY IS BETTER WORLD TECHNOLOGIES, INC. IT IS OWNED BY DENNIS LEE...

There are all sorts of technologies that are presently in progress. BWT has several research facilities and machine/fabrication shops staffed to get the job done. Learning a lesson from the earlier California days, BWT is spread out all over the USA. In the United States, BWT is funding research in Florida, Delaware, California, Missouri, Colorado, Idaho, North Dakota, Washington, Virginia, New Mexico, Nevada, Iowa, Indiana as well as supporting several facilities in New Jersey. The march of technologies is ongoing. We are also financing inventors in other parts of the world. When inventors have ideas that Better World Technology thinks will work, we get involved. We help the inventor get the project to the prototype stage, and then to the pre-production stage and into production as well. When this has been accomplished, United Community Services of America gets involved with the national dealer network. UCS of A is capable of manufacturing/assembling the product as well as marketing and financing sales.

SOME OTHER EXCITING PROJECTS IN THE WORKS...

A NEW PROPULSION TECHNOLOGY...

It can eliminate the need for NASA altogether. This device will be able to get one G of force with a 10 horsepower motor. This means that 1,000 pounds can be levitated using a 10 HP motor. It also means that with another 10 HP (20 HP), one thousand pounds could be raised through our atmosphere at 32 feet per second per second. With 30 HP it could be raised at 64 feet per second per second (of course, it could levitate 3,000 pounds or raise 1,500 pounds up at the rate of 32 feet per second per second). This means that the engine in your existing pickup truck could raise the same payload into space as the current space ship launching by NASA is doing now (without a launching pad or very much exhaust). This means we will soon be capable of low cost space travel. We could go into space, pick up mineral rich asteroids, and return to the earth with them with no re-entry problems to mine the richest deposits of minerals known to man (asteroids from space). Plus a lot more.

A CAMERA THAT FILMS THROUGH WALLS, STEEL WALLS AND EVEN YOUR SKIN OR MUSCLE LAYERS TO TAKE PICTURES (STILL OR VIDEO) OF WHAT IS ON THE OTHER SIDE

This camera will be able to take pictures of your vital organs while you are standing up or even take a video of your skeleton while you are standing or laying down. The doctor can look at your heart through your clothes, see tumors, plaque, or even the size and color of your appendix while you are standing there! Emergency staff at an accident could send videos thru a modem to the doctor at the emergency room to prescribe treatment right at the scene!

AN EXPLOSIVE PROOF MESH

Imagine lining the insides of gas tanks and tankers with an explosive proof mesh that will prevent that tank from ever blowing up (NO MATTER WHAT HAPPENS). ALSO IMAGINE LINING NOT ONLY THE TANKS, BUT ALSO THE BAGGAGE COMPARTMENTS OF JET PLANES WITH THIS... GOOD BYE TERRORISM!

BWT HAS OBTAINED THE EXCLUSIVE MARKETING RIGHTS TO A PROCESS THAT CAN NEUTRALIZE ALL RADIOACTIVE WASTE (ALPHA, BETA, AND GAMMA) FOR THE ENTIRE UNITED STATES OF AMERICA.

Believe it or not, there is a process that can enable scientists to use Browns Gas in a special way to neutralize radioactive waste. BWT became partners with Professor Yull Brown for the marketing rights to the process in the USA. While the government is trying to take the radioactive materials that are currently exposing the people of this country to the greatest threat to their existence in our history and bury it in the ground, there is a much better solution. It can be made completely stable and thus neutral. It has already been demonstrated. This is by far the most important discovery of all we have found. The following picture is of a New York Congressman the Honorable Dan Haley addressing an audience in which he is relating the details of a demonstration which Professor Yull Brown did for a US Congressman, Honorable Berkley Bedell of California In it a piece of cobalt 60 was over 90% neutralized in one pass. The geiger counter in the room did not go off, but the geiger counter that read the radioactive level of the sample in the first place was at a reading of 1,000 just before the procedure and instantly went to a reading of only 40 after Professor Yull Brown zapped the sample. The U.S. Congressman, after witnessing the demonstration, called the Department of Energy and they sent five scientists down to witness the same demonstration with the same results. We are currently trying to get the US government officials to wake up and let us do a very public demonstration of the process to prove to the people of this country that the entire nuclear waste problem can be eliminated (NOT JUST BURIED AND POSTPONED FOR A WHILE). The UCSA dealers cannot distribute this technology, so we found a unique way for them as a group to profit by using this unique technology.

WITH MORE COMING THAN YOU COULD EVER IMAGINE

THIS IS A PROJECT OF THE HEART. WE HAVE DARED TO DREAM THE IMPOSSIBLE DREAM AND FOLLOW THE VISION

The idea that energy could and should be freely abundant is not necessarily harmful to the infrastructure of America. It certainly is not to the rest of the world. This could be a great boost in production, especially since electricity has been the single most important technology to the GNP of this country (see chart below left). What could free fuel really do for the production of goods and services in the USA? There is no reason why the big utilities cannot exploit their grid system to deliver it. There is no reason why the fossil fuels people would go broke just because they lose one market when they have petro-chemicals. (Maybe we can stop destroying trees to live in permanent plastic homes.) We have been laughed at because we were foolish enough to fight the big oil and gas companies. We have persevered through a decade of this attitude. Now, we are certain that when the people see clear alternatives they will stop laughing. We started on nothing and have deliberately grown through incredible obstacles to the place where we have a nationwide distribution network, factories, machine shops, foundries, and all sorts of expertise. Our dealers range from an elderly lady on social security to the largest refrigeration supply house in the USA. Major corporations have also bought in. We are a force that will not be stopped. In 1996 BWT was inducted into the International Inventors Hall of fame. In the same year we went to Washington DC and did an energy show for the Congress and all representatives of the Federal Government. More importantly, we did two tours of the entire United States. We showed the people more than their Department of Energy has ever shown them... The most astonishing part is that this is just the beginning. FREE Energy is energy the consumer does not have to pay for. The machines cost money, but FREE Energy is more than possible and is very practical now! We do not believe in over unity. Energy must come from somewhere, but to say there is no such thing as perpetual motion is sheer folly. Of course there is (as long as there is a perpetual energy source)! Gravity, solar, magnetics are all examples of a perpetual energy source. The earth (a huge mass) has traveled around the sun at 78,000 mph (faster than anything man has ever built) pretty much perpetually. The energy source is the sun's gravitational pull! If we could tap into the same energy source would it not be perpetual motion?

GNP and Electric Consumption chart...

This chart shows the amount of electricity consumed in the USA in the last 90 years. The same line also shows the GNP for the last 90 years. Does this tell you anything about the financial importance of electricity to the USA?

Inventor Hall of Fame Award for BWT (1996)...

The research team for Better World Technology won the ADVANCED TECHNICAL THEORY AWARD for the concepts of free energy we were then working on. It was for our theories on how to eliminate all forms of pollution world wide and get us out of the fossil fuels era.

Grog Cartoon...

"Now, Grog! Throw!... Throooooow!... Throw throw throw throw throw throw!"

We do not want a new world, we want a better world, so we just decided to get down into the water and hope that the people will be willing to back us up. The technologies to do the job are available and we have survived the struggle thus far. We believe the people are ready for world changing technologies!

Seattle ALTERNATIVE Factory...

We started out manufacturing for ourselves and we know that end of it. In our national network of 2,000 dealers nationwide we have foundries, factories, marketing organizations, and machine shops. We can build, develop, and market any practical technology.

Our Company has Machine Shops...

We have three machine shops of our own at the becaoned call of the various researchers that we have in house and scattered throughout the world. We do not typically send out work unless it is impossible for outsiders to learn much.

We Have Skilled Technicians...

We have professionals on the payroll to fabricate, machine or build and test anything whether it is metal, wood or electronics. In addition, many of our dealers have these skills and often volunteer their services.

Our Support Shops...

We have all our own bridgeports, lathes, metal saws, grinders and all the equipment we need.

Our Support Technicians...

We have "in-house" machinists, welders computer specialists, etc.

Research Scientists...

We have experts on staff in electronics, mechanics, engineering, computers, hydraulics, fabrications, metalurgy, chemistry, electricity...we also support outside inventors.

Pre-Production Shop and Expertise...

Once a working model has been made of an invention, it is time to get a different team on the job. Those who do pre-production modeling are different than inventors. They make a model that can be copied for manufacturing.

At the BWT Research Resort, we have a 20 room facility with sauna, hot tub, and a country kitchen and all the service staff. We also have another machine shop, storage, and fabrication shop. Experts are assembled here to live and think together until a problem is solved whether it only takes a day or two, weeks, or even longer. We even have a surveillance proof conference room. Security is very tight! BWT speaks to no one except UCSA who only speaks to their dealers. (note: R.J. Pirrone is a business broker that buys and sells UCSA dealerships to the public. They talk to anyone interested). The only exception is that we do also speak to outside inventors who want to join or effort.

The BWT Think Tank...

We have a hotel type facility where experts are brought together to work and live together until a problem can be solved. There are conference and think tank rooms with a fully equipped shop, engineering computers, and library.

ALL OF THE PRODUCTS DEVELOPED AND FUNDED BY BWT WILL BE MARKETED EXCLUSIVELY BY THE 2,000 DEALERS IN THE UNITED COMMUNITY SERVICES NETWORK

Only the dealers in the network will ever have the rights to distribute these technologies worldwide! The dealers have already been recruited. If you see something in this brochure that you would like to buy, you will have to contact a UCS of A dealer in order to do so. If you just want information about a product or products in this brochure you will have to contact a dealer to get it. There is no group or entity in the world that is powerful enough to deal directly with UCS of A or BWT on any of these technologies. PLEASE DO NOT WASTE OUR TIME TRYING TO GO DIRECT. BWT deals ONLY with UCS of A, and UCS of A deals ONLY with their dealers. UCS of A will NEVER issue another dealership. All 2,000 have already been issued. THERE WILL NEVER BE ANY MORE THAN THAT! If you are interested in getting involved with the distribution of these technologies, you must buy out one of the existing dealers. If a dealer in good standing wishes to sell their dealership to anyone else (or to any business entity) they most certainly may.

A NOTICE OF CAUTION FOR ANY WOULD BE BUYERS OF UCS OF A DEALERSHIPS:

Let us caution the buyer that you should get official recognition from UCS of A of the transaction before giving the seller any money to buy a UCS of A dealership. UCS of A will work with the dealers for them to properly sell their dealerships to others. The price will be whatever the dealer agrees to take for the dealership. Before buying one, the would be buyer is entitled to receive written confirmation from UCS of A that the dealership is, indeed, a valid dealership and is in good standing. The dealers have been recently selling their dealerships for as much as 50 times what they sold for when it all began in 1988. Of course, as the companies develop more of a product line the value of these dealerships can be expected to increase. UCS OF A realizes that the potential for increased value was an attraction for certain of the original dealers. Some of the dealers initially bought multiple dealerships so they could sell one or more of them to get operating capital for the one they decided to work themselves. It is very much in the best interests of UCS of A to have productive dealership entities rather than inactive dealers that are speculating. It is also good for the project that someone that cannot do much with the opportunity they have be able to sell it to a new owner that intends to move products. Even if the new owner is speculating themselves, it is the belief that ultimately someone will purchase the dealership with the idea in mind of doing something with it. The more a dealer pays for the opportunity, the more they will have to do with it, so UCS of A is pleased to see dealers selling the opportunity for a good return to themselves. UCS of A has nothing to do with a transaction between a dealer wishing to sell his, her, or their dealership to another party, but **MUST** insist that the new buyer be obligated to the original contract and all modifications to date! When a person, group of investors, or corporation buys one of these existing dealerships, they are buying a relationship with UCS of A. While some of that goes all the way back in time a decade, we **MUST** insist on uniformity in the network. **ALL THOSE WHO TAKE OVER DEALERSHIPS MUST ALSO ABIDE BY ALL THE RULES AND REGULATIONS OF THE PROJECT. THE SELLING DEALER CANNOT CHANGE THE TERMS AND CONDITIONS BETWEEN THE COMPANY AND THE NEW OWNER OF THE DEALERSHIP.**

IF THE READER OF THIS BROCHURE IS INTERESTED IN OBTAINING FURTHER INFORMATION ON ANYTHING COVERED IN THIS BROCHURE, CONTACT US AT:
